

DEMOLITION ACKNOWLEDGMENT & WAIVER

Countertop demolition must be done prior to, or on the date of installation. All appliances and sinks must be disconnected before demolition can be performed. The sink, range or cook top, and refrigerator must also be removed from the countertop before scheduling a countertop demolition and installation. Cabinets must be clean, this includes under the sink base cabinet as well. Moldings and/or storage cabinets that sit on the existing countertops must also be removed prior to demolition.

We don't do plumbing, carpentry, or electrical work; recommendations to contractors can be provided upon request. It is common when removing tile backsplash for damage to be done on the Sheetrock walls, as tile is typically adhered strongly to the wall. Sunset Granite is not responsible for such damage and/or repair to the walls. We always do our best to avoid damage to your walls, trims, and cabinets but this is not guaranteed for the nature of demolition is at times unavoidable.

If Sunset Granite has to move appliances during demolition or installation, we will not be responsible for any damage done to them. It is also the client's responsibility to have the cabinets leveled within 1/8 of an inch before the installation takes place. It may seem to be an inconvenience, but we cannot install on unlevelled cabinets because the integrity and longevity of the stone will be compromised.

Please make sure all correct steps are taken prior to the templating and installation day to prevent an additional trip charge shall the job might be cancel for lack of properness.
